## ProMed Scanning Solutions

Innovative Scanning Solutions  
for Physician Practices, Clinics, and Hospitals

**Document scanning can be a labor intensive and time-consuming process, especially in healthcare.**

**ProMed Scanning Solutions** cut data capture operating costs by integrating with your existing PMS/HIS system, and with the leading document management systems (including our own **ProMed DM** solution), providing a single scanning platform to meet the needs of the entire organization. Capture laminated insurance cards and driver license, multi-colored forms, EOBs, EKGs, and handwritten scripts. **ProMed also provides integrated data capture for fax, email, and electronic files.**

### ✓ Patient Registration Scanning

### ✓ Medical Records Scanning

### ✓ High-Volume Batch Scanning

### ✓ EOB Recompiler

### Patient Registration Scanning

**One-touch scanning.** Advanced image processing and enhanced barcode recognition, reduce the time needed for document prep and manual indexing. The solution uses **ProMed Enabler** to automatically pull index info from your registration screen; with **no additional data entry**. Just place the document on the scanner and click the on-screen button to select either driver license, insurance card, or referral document. Previously stored images for the patient can be immediately accessed, eliminating the need to re-scan. Account or encounter number is updated automatically for the existing image(s).

#### Key Benefits of ProMed Patient Registration Scanning:

- Requires zero data entry by registration staff
- Standardizes registration process; guarantees verification of ID & insurance
- Display a complete list (by MR#/acct#) of identification documents and other scanned information stored in your PMS/HIS & other backend systems

*The cost of filling and maintaining a single cabinet is staggering: as much as \$2,000 per year for a standard 42" wide, 4-drawer cabinet!*

### Medical Records Scanning

**ProMed Medical Records Scanning** provides highly advanced scanning capabilities to capture patient documents of varying type, age, color, size and content. Labor costs are minimized by built-in sophisticated image processing techniques and enhanced barcode recognition. Time and error-saving capabilities like automatic forms classification and data extraction for Encounter Form processing can be added to allow charge data to be sent directly to your billing system. ProMed's simple user interface provides chart page sorting to quickly locate documents. Forms classification and page sorting means ProMed can even automatically identify chart deficiencies.

#### Key Benefits of ProMed Medical Records Scanning:

- Designed specifically for charts; no need to sort chart by document type, single vs. dual-sided, landscape vs. portrait
- Simplifies the sorting of document types within a chart
- Automates the extraction of data directly from scanned documents for indexing
- Ability to customize internal workflow for scanning, indexing and quality assurance
- Ability to store document images on microfilm for archive and legal retention

# ProMed Scanning Solutions

## High-Volume Batch Scanning

Given their typically lean IS staffs, most hospitals desire one scanning solution that can be used across accounting, purchasing, HR, and clinical departments. **ProMed High-Volume Batch Scanning** combines a configurable user interface with the most advanced image processing available from industry leaders Kofax and Kodak, creating a scanning system that is user friendly, requiring minimal data entry with flawless image quality. Kofax's **VRS** and Kodak's **Perfect Page** enable **ProMed Scanning** users to scan more documents with less document prep, while achieving the highest image quality, and enabling data extraction, data validation, forms classification and invoice processing.

**ProMed High-Volume Batch Scanning** provides you with advanced features like:

- Enhanced Barcode Recognition
- Auto Page Orientation
- Blank Page Detection
- Advanced Image Clarity

### Key Benefits of ProMed High-Volume Batch Scanning:

- Scan greater volumes with fewer staff
- Achieve high image quality with reliable barcode recognition
- Provide flexible user interface designed to eliminate keystrokes

## EOB Recomposer

**ProMed EOB Recomposer** combines high-volume scanning of paper EOBs with electronic remittance parsing to create individual EOBs for each patient. **No more manual copying and redacting of paper EOBs.** The scanning application provides flexibility to accommodate a wide array of payers and complex EOBs, and requires minimum document prep. The scanned images are auto-indexed by patient, based on the EOB content, eliminating manual data entry. High quality images ease secondary billing.

Payer electronic remits are parsed to create "virtual EOBs", which are automatically indexed by individual patient and stored within ProMed DM.

All images are easily retrieved directly from within your PMS/HIS with a simple hotkey and zero data entry.

### Key Benefits of ProMed EOB Recomposer:

- Creates an individual patient EOB, eliminating the risk of exposing protected health information (PHI)
- Eliminates manual copying and redacting of EOBs
- Parses electronic remittances
- Provides auto-indexing of images based on content
- Automatically creates documentation for secondary billing
- Enables image retrieval directly from the PMS/HIS or billing system
- Allows for advanced EOB searching by Rejection Codes or Procedure Codes

**Patient Chart Conversion Services for fast, efficient and secure conversion of your paper charts into digital patient records.**

**Interoperability & integration with your Practice Management System & Electronic Health Record systems.**
